Energy Use Comparison

Definition of Terms for Electric

Generation & Transmission: The cost to produce electricity at power plants and the cost to move this high voltage electricity to the cooperative.

Fixed Monthly Facilities Fee: A fixed fee that covers a portion of the costs for electric meters, lines, or equipment that connect you to the cooperative's local delivery system. This fixed fee does not vary with the amount of electricity that you use.

Distribution Charge: A variable based usage charge that covers a portion of the cost for the movement of electricity over the transformers, substations and other equipment to consumer's homes and businesses.

kWh Tax: A consumption tax charged by the State of Ohio, based upon electric usage.

Demand Charge: A pricing structure for electricity based on the maximum amount of power a consumer uses.

Kilowatt-hour (kWh): The basic unit of electricity energy equivalent to the kilowatt used for one hour. For example, ten 100-watt light bulbs used for one hour (10 bulbs x 100 watts x 1 hour = 1000-watt hours, or one kWh).

Operation Round Up: Members pay their electric bill through The Energy Cooperative Foundation, sending 100% of the bill to the foundation.
